

Large Dataset at a Glance

Using Particle System for Scientific Visualization

Ravikiran Dighade (ravikiran@umbc.edu)

Other techniques

Insufficient number of attributes

Particle System?

Technique to simulate fuzzy phenomena
Examples: Fire, Explosions, Smoke, Water, Sparks, Leaves, Clouds, Fog, Snow, Dust

Particle Attributes

Size, Shape, Density, Color, Life cycle, Direction, Velocity, spread, gravity, turbulence, granularity, and more

Goal

1. How particle attributes can be used to show structure?
2. Which particle attributes are effective in visualizing the dataset?
3. How much visual interference occurs between each of the attribute dimensions?
4. How much variation can one have to minimize any loss of information?

Future Work

Study other particle attributes

Data Set

Network traffic, automobile traffic, email messages, and people moving into, out of, or through a space.
